Professional Summary

Java Backend Developer specializing in building scalable Microservices using Spring Boot. Experienced in designing secure RESTful APIs, implementing JWT-based authentication, service discovery, structured logging, and production monitoring. Strong understanding of enterprise Java, database design, and cloud-native deployment.

Skills

Backend Development: Java, Spring Boot, Spring Security, J2EE, Servlets, Hibernate, JSP, MVC, RESTful API

Databases: MySQL, Transaction Management, ORM, Database Schema Design

DevOps & Monitoring: Docker, AWS EC2, Eureka Server, Spring Actuator, Prometheus, Grafana, Log4j

Testing: JUnit, Unit Testing

Tools: Git, Maven, Postman, Swagger, GitHub Copilot

Experience

Software Engineer Intern | *On-Site*

Dec 2025 – Present

Mphasis

Bengaluru, India

- Built Microservices using Spring Boot with Eureka Server for service discovery and cross-service data transfer, integrating Log4j for structured logging and Swagger UI for REST API documentation.
- Configured Spring Actuator to expose application health metrics and partially integrated Prometheus and Grafana for real-time service performance monitoring dashboards.
- Implemented enterprise Java fundamentals including Servlets and JSP for server-side request handling and dynamic content rendering, strengthening core understanding of production-grade Microservices architecture.

Projects

Quick Cart | *Spring Boot, Spring Security, React.js, MySQL* | [GitHub](#)

- Engineered a scalable e-commerce backend using Spring Boot, designing RESTful APIs for product management, order processing, and user operations following MVC architecture.
- Implemented secure transaction handling with JWT-based authentication and role-based authorization integrated into business workflows.
- Designed relational database schema in MySQL, optimizing queries and managing entity relationships to ensure reliable order and user data consistency.

Authentication & Authorization System | *Spring Boot, Spring Security, JWT, MySQL* | [GitHub](#)

- Designed and implemented a stateless authentication and authorization module using Spring Security with JWT token generation, validation, and lifecycle management.
- Configured custom security filters and authentication providers to protect endpoints and enforce request-level authorization.
- Implemented secure credential management using BCrypt encryption, integrated MySQL for user-role persistence, and applied centralized exception handling for robust API security.

Education

PSG College of Technology

August 2024 – Present

Master of Computer Applications

CGPA: 8.13 / 10

Loyola College

August 2021 – April 2024

Bachelor of Science in Physics

CGPA: 8.66 / 10

Certifications and Achievements

Finalist in Qualcomm Edge AI Hackathon – 2025

Sports Secretary, Loyola College – 2023–2024

Member, Friends of Figma Community

Machine Learning Specialization

Innovation through Design
